

TetraMAN WASH

Hand wash lotion

Biocide

Advantages

- Cleaning & hygienic hand wash
- Rapid germ reduction in a short time
- Skin-friendly due to a moisturizing agent with allantoin and optimized pH value
- Dermatologically tested „very good.“

VAH

Areas of application

- Hygienic Hand Washing
- Hand cleaning
- Full body wash (including hair wash)

The PuraDes hygienic hand wash TetraMAN WASH is an antimicrobial washing lotion for cleaning and decontamination of skin and hands, even under dirty conditions with fat or protein. It is also suitable for antimicrobial body washing, e.g. in MRSA-colonization, especially for use before hospitalization. The mild moisturizer protects the skin from drying out and leaves the skin feeling pleasant.

Composition

100 g solution contains:
1,2 g chlorhexidine gluconate
0,98 g didecyl dimethyl ammonium chloride.

Instructions for use

TetraMAN WASH gently cleans and decontaminates in one-step and disrupts the chain of infection. Due to the physiological pH-value, the product has a very good skin compatibility, without colorants and scents, with allantoin.

Suitable for use in medical and food processing areas.

Wet hands with water; apply approx. 3 ml of hand washing lotion to hands, lather for at least 30 seconds and then rinse thoroughly with water.

Also suitable for temporary full body washing in case of MRSA contamination. For this purpose, apply the product to a wet washcloth or sponge and wipe the skin with it. After at least 30 seconds, rinse the affected area of skin with water. Use the hand washing lotion in the same way as commercial products when showering.

Efficacies and test methods		Pollution	30 sec.
Bacteria and fungi			
Recommended use for hygienic hand washing*	EN 1499/VAH		●
supplementary test results as per EN
